Gaisar Davletkildin

Fullstack Developer

I'm Gaisar, a software engineer with 6 years of experience. My expertise includes React, TypeScript, MobX, and Node.js. Additionally, I have a good knowledge of Vue, React Native, and Redux. In my testing practice, I use Jest and Storybook.

I've successfully launched numerous projects spanning various technologies, demonstrating my adaptability and versatility in delivering high-quality solutions. Currently, I'm leading the development of a CRM system.

As an individual, I pride myself on being responsible, open-minded, and honest. I would be pleased to offer my skills and experience to your projects. Thank you!

Experience

06.2023 - Present

Senior Frontend Developer | AdTech Holding

Developed a CRM system for company managers, streamlining client interactions and task management processes. The system allows managers to input customer data, conduct negotiations, delegate tasks to other team members, and monitor task statuses in real-time.

- Led the creation of the CRM system from conceptualization to implementation
- Developed a UI-components library utilizing Material-UI (MUI)
- Executed extensive refactoring and rewriting of legacy components and application sections to enhance performance and maintainability
- Optimized the application build process.
- Applications architecture development

07.2021 - 06.2023

Senior Frontend Developer | Beeline

Developed web applications for candidates and company employees with functionality for requesting vacation, sick leave, business trips and etc. Additionally, led the creation of UI-kit and mentored front-end developers courses.

- Creating two web applications for employees and candidates
- Creating a library of components (UI-kit)
- Choose programming languages, tools, or applications
- Code review
- Applications architecture development
- Front-end developers mentor in "beeintern" courses by Beeline

05.2019 - 07.2021

Middle Fullstack Developer | Sberbank

Contributed to the development of two pivotal projects: an online banking platform catering to business clients and a CRM system tailored for managers engaged with these clients.

- Played a key role in creating a dashboard module within the main application
- Launch a CRM System
- Integrate a telephony system to CRM
- Create a calendar module in CRM
- Write unit tests (Jest)
- Code review
- Created a library of components
- Applications architecture development

03.2017 - 05.2019

Frontend Developer | OnPoint

Responsible for designing and developing captivating CLM (Closed Loop Marketing) web-presentations enriched with animation and gamification elements. These presentations provided interactive feedback collection and engagement functionalities.

- Created web games optimized for tablet devices
- Created animated presentations and surveys
- Collaborating closely with clients to discuss design solutions
- Documenting software and technical specifications to maintain clarity
